

MEGA METAL SANAYİ VE TİCARET A.Ş.

ENERGY POLICY

Energy constitutes one of the largest cost items of Mega Metal San. ve Tic. A.Ş. As Mega Metal San. ve Tic. A.Ş., we analyse and improve the amount of energy consumed per unit of production in order to ensure more efficient use of energy.

Our Company is committed to:

- Providing the necessary resources to continuously improve our energy performance through developing technologies, while taking energy efficiency into consideration across all processes of our operations,
- Monitoring all legal and other requirements relating to energy and taking a leading approach in their implementation,
- Carrying out the necessary development activities to establish a culture of energy efficiency among all employees,
- Using internal and external resources in the most effective manner in energy efficiency projects,
- Supporting the procurement of energy-efficient products and services, as well as design activities that will improve our energy performance,
- Continuously improving our energy performance each year through ongoing improvement activities.

Our Energy Policy is based on our objective of preserving today's resources in order to contribute to a sustainable future and ensuring the more efficient use of all forms of energy through a systematic management approach.
